

Simple Machine Poster

The kids will really enjoy this “simple machine hunt” and I think you will get excited about it too! It will count for one **Test Grade** and is **required**. Students will create a poster by dividing a poster into six equal parts and illustrating each simple machine in each section. The project is due on _____.
(Points will be deducted for each day the poster is late.) Please have your child follow the directions below:

1. Divide poster into six equal parts.
2. Write the names of each of the six simple machines (one in each part).
3. Students may choose to fill each simple machine box by drawing simple machines, finding pictures in newspapers, magazines, on the internet, or taking photographs themselves.
4. Finally, your child will need to label each individual machine in the boxes.
5. Be creative as you would like to be!

Grades will be based on the following rubric:

	Perfect!	Pretty Good	Needs More Effort
Lists all six Simple Machines (35 points)			
Places 3 or more pictures in each box correctly (35 points)			
Labels each picture (10 points)			
Correct spelling and overall neatness (20 points)			

Please sign and return this bottom portion so I can be sure that everyone is aware of the project and feel free to ask any questions you might have about the project.
